Using and Understanding Integration Engine and Web Services

This three day course on Using and Understanding Integration Engine and Web Services is designed for you to understand configuring both Integration Engine and Web Services; creating Integration Engine packages to import data. An overview of SDE Architecture is provided to provide an understanding of the views and tables for effective importing and how database administration may be required to create an effective integration engine package. Students learn to import clients and assets and learn how to perform a reconcile of imported assets to existing assets and populate a log table. In addition, students will learn how to replace business rules that sit in the Job Queue for long periods with immediate rules that fire on a field being populated by an Integration Engine Package. Finally, students will learn Web Service Basics, including publishing and consuming Web Services and using a Web Service in a CSBR for automation.

- By the end of this course, you will be able to:
- Describe and understand SDE Architecture as relates to Imports
- Configure the Integration and Web Service
- Import Clients
- Import and Reconcile Assets
- Use Integration Package with Business Rule
- Use a Web Service in a CSBR
- Publish a Web Service
- Consume a Web Service
